

WEEESH.COM

THE PERFECT PRESENT!

25/11/2018

THE PROJECT

1. Problem we want resolve

I have to buy present for birthday of my friend. I have to buy present for my father.

We have to buy present for the graduation of our friend.

Which present we could buy?

We want buy a useful present for the person, and we want make a good impression!

2. Our vision

We are making a website weeesh.com that helps people to match their interests.

The person FOO will be happy to share the presents he wants to receive.

The person BAR, friend of FOO, can go on weeesh.com to choose the present to buy for FOO.

After this base functionality, we want add more functionality, like:

- Collect money with friends and buy a present together;
- For wedding, will be possible to make a wedding list with all present that FOO and BAR they want receive;
- For shops and ecommerces, it will be possible to create the own page
- At the same time, we want that all website, could add the button "ADD to my WEEESH.com". In this way, every person will have one wishlist in one place.

3. Benefits

Make people more happy with this service. The person FOO will not be more stressfull, thinking which present had to buy for their friends.

4. Deliverables

- Signup process
- Login process
- Search for friend
- CRUD List
- CRUD Present
- Book present of our friend

5. Access criterias

It's mandatory to signup and access via login. Without login you cannot see anything.

6. Deadline/Plan

The entire webapp will be created with Localization pattern of Laravel. In this first step we use 2 languages: English and Italian.

- Step 1 - Build the home page stream with present of friends (like Instagram homepage)
- Step 2 - Complete the CRUD operations with images for
 - Friends
 - Lists
 - Presents
- Step 3 – Login integrations with other websites
 - Amazon ??
 - Google
 - Facebook
 - Instagram
 - Linkedin
 - Twitter
 - Pinterest
- Step 4 – Build a better profile page of person
- Step 5 – Build a better profile page of list
- Step 6 – Build email/notification system

7. Budget

This project is self financed and now I can spend about 500€.

After end of first 3 steps we will ask for funds on friends, crowdfunding, other ways.

Who I'AM

I'm Francesco Massimo Gallo, 32years old.

I'm graduated in Computer Science and I want be useful for other people.
